SUMMARY

- Software engineer with 4+ years of experience building APIs, working with SQL databases, and general web development across both distributed and monolith architectures. Experienced in AI-assisted, spec-driven development and validating AI-generated code.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, C#, HTML, CSS
Databases: Microsoft SQL Server, PostgreSQL, Turso
Frameworks & Runtimes: Node.js, jQuery
Tools: SQL Server Management Studio, Postman, DevOps, GitHub Actions, Kubernetes, Docker
Methodologies: Agile/Scrum, CI/CD
AI Assisted Development Tools: Claude Code, Claude, ChatGPT

PROFESSIONAL EXPERIENCE

Andea • Brea, CA • June 2022 – Present
Software Engineer

- Led deployment of an in-house application to client systems, provisioning Kubernetes clusters with SQL Server and S3-compatible storage. First deployment of its kind at Andea; documented the process, which has since been used for 2 additional client deployments.
- Built a desktop code-checking tool that automatically enforced coding guidelines across 3 projects using AI-assisted development, catching violations before review and clearing 10+ backlog tickets.
- Developed and maintained Node APIs in multiple different client infrastructures, both architected as distributed systems and monoliths.
- Wrote Python scrapers to extract internal system documentation, creating the dataset behind the company's internal AI assistant, now used by the dev team for daily coding support.
- Provided real-time troubleshooting during production go-lives, resolving blocking issues alongside end users across 4 client deployments.
- Developed and maintained SQL stored procedures, views, and scripts for client data operations.
- Participated in code reviews, architecture discussions, and Agile sprint meetings; authored and maintained technical documentation.

DK Web Design • Chico, CA • November 2020 – March 2021
Junior Frontend Developer (contract)

- Delivered web projects for clients from initial design through launch using HTML, CSS, JavaScript, and jQuery, providing direct customer-facing support throughout the project life-cycle.
- Rewrote the company's technical documentation, including reference sheets, mockups, and schema maps.

PROJECTS

Snowball Web Forum • Golang, PostgreSQL, htmx, GitHub Actions • September 2026 – Present
Solo Developer

- Built an anonymous web forum entirely through Claude Code using spec-driven development, with a living project spec (architecture, schema, decisions) giving the AI full codebase context.
- Designed the authentication system: argon2id password hashing, hashed session tokens in secure cookies, atomic single-use recovery codes, CSRF protection, and IP / per-account request rate limiting.
- Validated AI-generated code with 160+ unit, integration, concurrency, and fuzz tests in GitHub Actions CI; fuzzing caught an open redirect and a memory-exhaustion bug.

EDUCATION

California State University, Long Beach • Long Beach, CA • August 2015 – December 2018
Bachelor of Science, Computer Science
